(54) Title: **LIQUID CRYSTAL DISPLAY APPARATUS**

(57) Abstract: In an LCD apparatus (400) having simplified structure and improved luminance, a light supplying unit (100) supplies an LCD panel (280) with red light during a time corresponding to one-third of a frame, green light during the time and blue light during the time. A light reflective-transmissive unit is disposed between the light supplying unit (100) and the LCD panel assembly (200) to transmit the red light, the green light and the blue light and to reflect an external light from exterior of the LCD panel assembly (200). The LCD apparatus displays an image by means of white light as well as red light, green light and blue light, thereby improving luminance and simplifying structure.
